To Whom It May Concern,

Cimco Refrigeration has been a long service provider at the John Labatt Centre since 2002. In that time we have found Cimco to be a very reliable contractor that exceeds our expectations.

In February 2011 we discovered a glycol leak in our snow melt pit coil. This posed a problem for us as we do not have an alternate snow dumping area and Cimco was there to get us through this and resolve it. While we could have installed the same coil, we would be in the same position 5-8 years later or less and looking for a replacement again.

Cimco came to us with a heavy duty, stainless steel melt pit coil. I have found this to be a more efficient coil by melting our ice shavings quicker than before. I have been very happy with the performance of the new coil and I would recommend going with this to anyone in need of a replacement melt coil.

I would be happy to answer any questions regarding our snow melt pit coil installation.
