

To Whom It May Concern:

It is with pleasure and complete confidence that I write this testimonial for CIMCO and Shaler's product RINK SEAL PRO.

We at the Avalon Arena Association – Twin Rinks have a long relationship with CIMCO and their support and customer service has been second to none. During the fall of 2016 a brine leak was identified under our ice surface. At that time several options were discussed including the traditional approach which includes removing the ice and concrete in the leak location. However, after discussion with CIMCO and Shaler and with their guarantee's on the product we decided to try their RINK SEAL PRO product.

The Result: After the product was dispensed into our brine system we notice that the leak has stopped within 2 days. It has now be 12 months since we used this product and to date we have not had any further leaks or added any additional brine to our system.

This product saved us money, prevented down time and lost revenue at a very busy time of year and in our case well worth the investment. If you have any further questions please feel free to reach out to me at any time.

Regards,

Stephen Haggerty
