**RE: Snow Melt Pit Coil Reference Letter**

Dear Mr. Welner,

During your most recent site visit you enquired on the performance of the new snow melting coil that was installed as part of our refrigeration plant replacement. It is performing better than I had expected.

Previously during ice maintenance days we would spend a few hours and several litres of hot water to melt the snow covering the pit. One of our problems was the depth of the pit, it was too shallow for the traditional snow melt coil.

The new coil is very compact and the heat transfer is great. Now after ice maintenance there is very little snow in the pit, mostly water.

Regards,
