Testimonial

In the summer of 2009 we added an electric desiccant dehumidifier in our Arena.

For a number of years we have put our ice in mid August to accommodate a Summer Bonspiel. The Decton unit that we had, although an excellent unit could not keep up with the high humidity we face during August and early September. Prior to the installation of this new dehumidifier we came in each morning to sweating glass, wet floors and lumps all over the ice. Once the desiccant was in place the difference it made was amazing. Within a very brief period of time the humidity levels in the building decreased, glass was clear and the ice quality improved dramatically.

We not only hosted our annual summer spiel here this past August but also acted as hosts to the Canada Senior Games Curling Championships. .

I would be very comfortable recommending this unit to anyone looking for a new dehumidifier, especially if you, like us need to put ice in during hot and humid weather.
