

VEGAS
GOLDEN KNIGHTS™

January 29, 2018

To Whom it May Concern:

I want to offer my personal thanks to the CIMCO team for their professionalism and hard work in supplying and installing two ice pads at City National Arena in Las Vegas, Nevada. I approached CIMCO because we required twin ice sheets and an 35,000 sq. ft. office complex in our new facility. It was crucial that these practice rinks for the Vegas Golden Knights match the ice quality of their NHL home at "T" Mobile Arena. The superior ice consistency in both locations has contributed to the amazing success that the Golden Knights are having in this 2017/2018 season.

CIMCO consulted with us at length and recommended that we install their "thermal energy plant", ECO CHILL®. This proprietary system uses ammonia and glycol and is designed to provide 100% waste heat reclaim for heating, cooling and hot water throughout the building. The results have been amazing—an energy efficient package that saves us money in energy and provides a payback ROI on the premium cost in less than three years - and a complete system payback in approximately 20 years. Another very important feature for us was that the ECO CHILL® system provides our Group the opportunity to contribute to a safer environment with zero GHG emissions.

I found the CIMCO team - Sales, Engineering, Project Management and Technical Crew - was extremely reliable and trustworthy. They met all our needs in a timely manner with great customer service, delivered on schedule and within the budget committed. I would certainly recommend CIMCO to people who require recreational refrigeration and in need of a thermal energy solution.

Sincerely,
